Assignment 9

MERN

Create following screens/pages using React.JS required for the REST API created at Assignment 7. Use react-router-dom for easy navigation between pages. Use AXIOS to connect with the REST API. Do required settings to avoid CORS error.

1. Create a page to display all the products available in the database.
2. Create a product details page to display the single product details and the owner details.
3. Create a search page to perform search operation based on product name.
